

CATENARY PAVILION

FROM FELIX CANDELA TO DIGITAL FABRICATION

TYPE: Computational Design

YEAR: 2022

TEAM: Andrea Cutroni, Flavia Tassi
& Alessandra Del Pico

FACULTY: Ilaria Giannetti

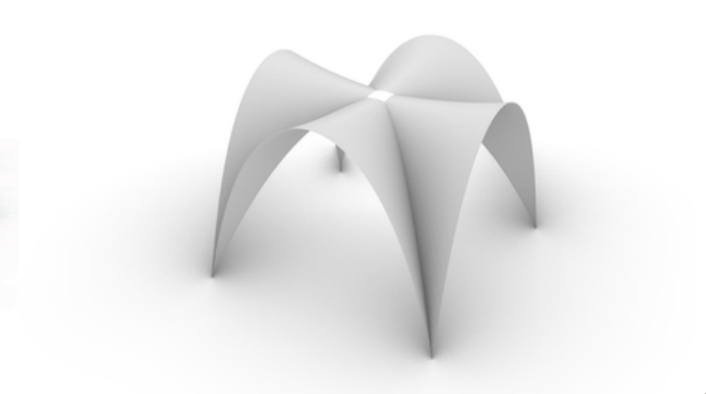

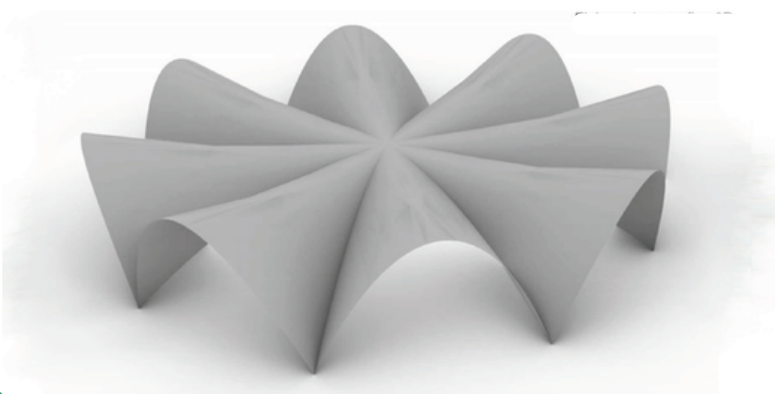

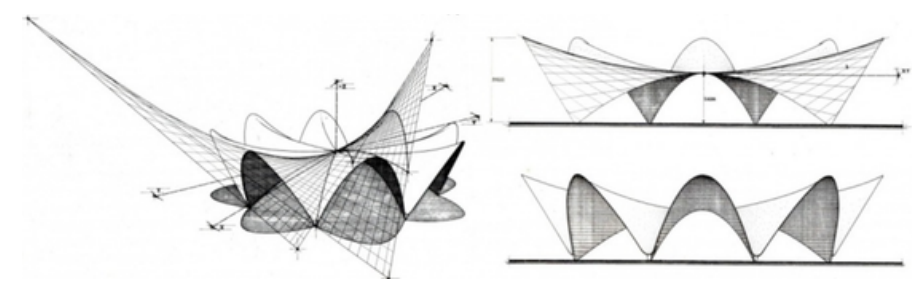

CONTEXT: Academic course
“Structures in Architecture”

The Catenary pavilion is a parametric structure designed with Grasshopper, inspired by Félix Candela's Restaurante Los Manantiales.

The surface, obtained by the intersection of two hypars, is discretized into a waffle structure and the arches are optimized as catenary curves. A prototype in MDF was realized using a laser cutting service.

This project showcases the potential of parametric design in creating complex and efficient structures.
