SUSTAINABLE TIMBER BUILDING IN MALAGA

TYPE: Architectural Design

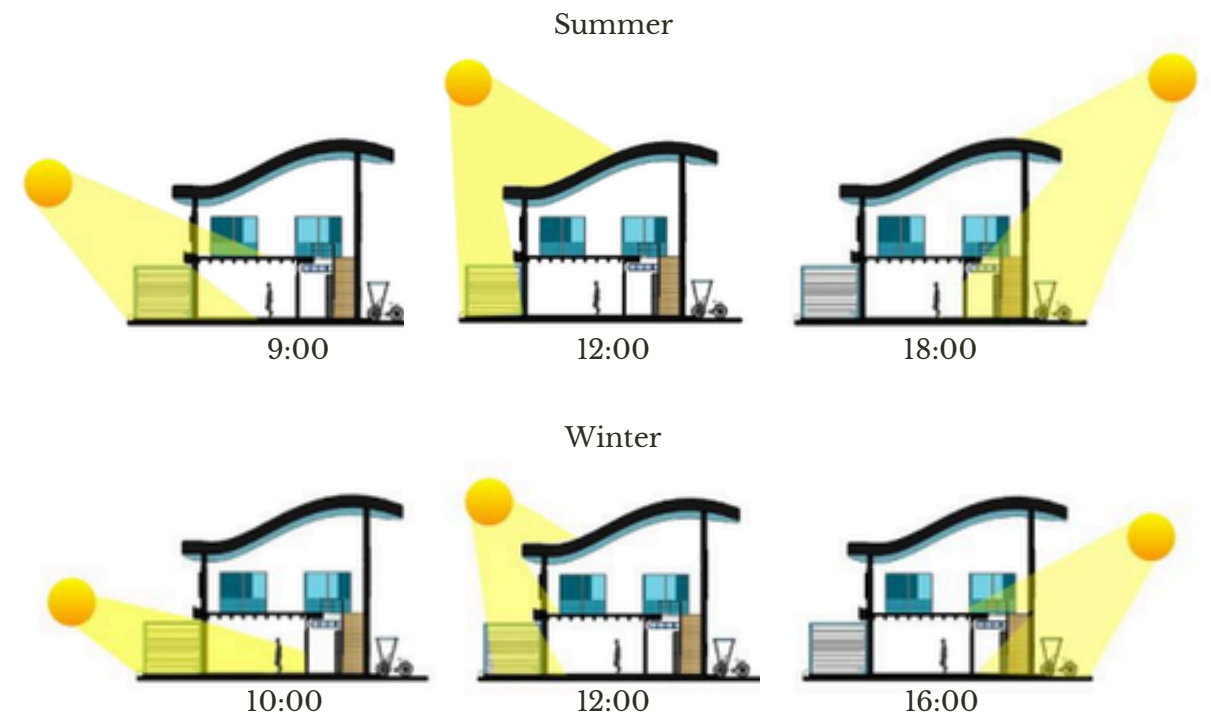

YEAR: 2022

TEAM: Andrea Cutroni, Carlos Romàn & Claudia Serment

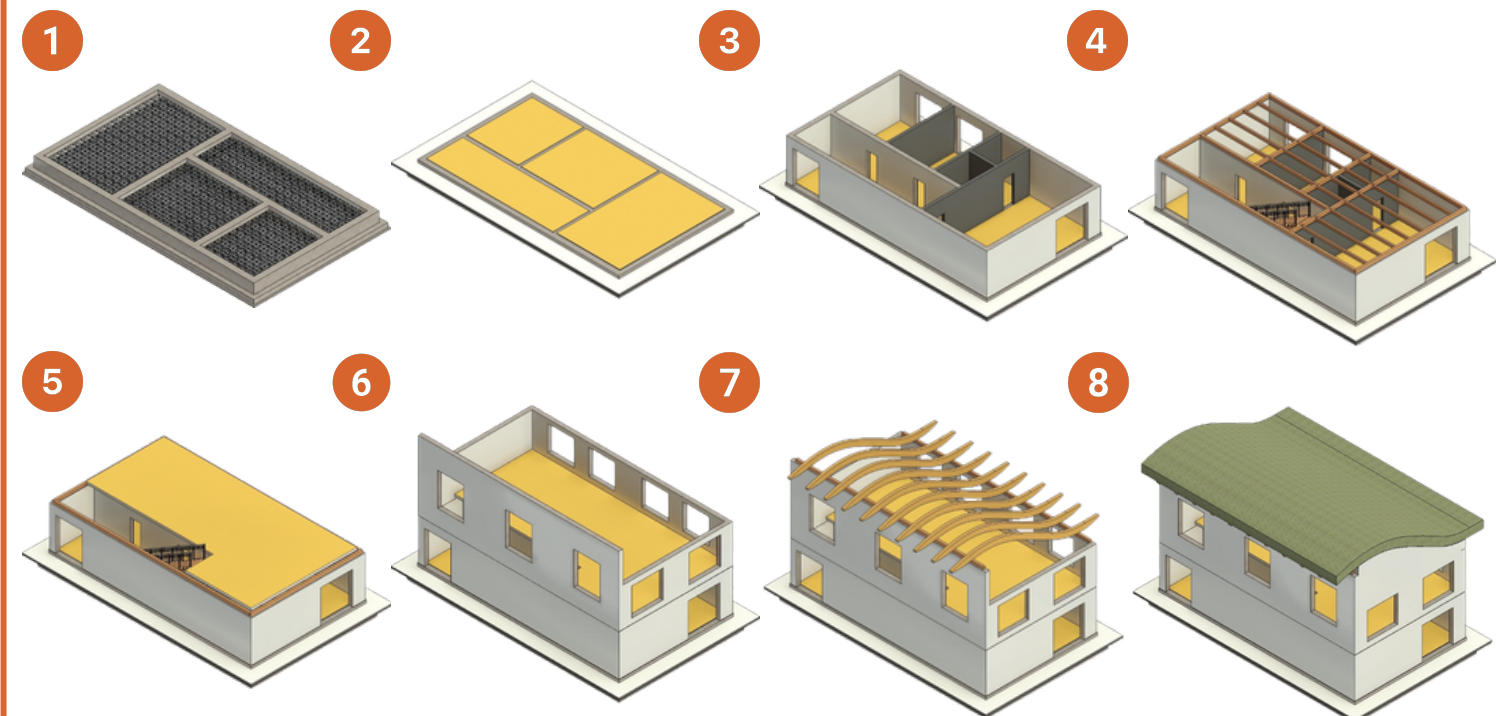

FACULTY: Javier Garabito

CONTEXT: Academic course
“Sustainable construction”

The project focuses on the development of sustainable design strategies for an office building in Malaga. The approach prioritizes natural ventilation, shading systems, and the incorporation of a green roof. Natural materials were selected throughout, utilizing timber for the platform-frame structural system, cork for insulation, and bamboo and recycled-material plaster for the interior finishes. The project was designed using AutoCAD, Revit and Twinmotion.
