

UNIVERSITY LIBRARY

ARCHITECTURAL & STRUCTURAL DESIGN

TYPE: Integrated Design

YEAR: 2023

TEAM: Andrea Cutroni &
Alessandro Abagnale

FACULTY: Stefania Mornati

CONTEXT: Academic course
“Integrated building design”

Architectural and structural design of a new university library comprising two levels and a basement garage. The building takes the form of two overlapping, rotated rectangular blocks in reinforced concrete, with circular pillars and bidirectional slabs. A steel structure supports the central staircase, while the skylight is supported by a system of CLT beams. The terrace features a green roof, the envelope uses a ventilated façade and the main entrance has a glass façade. The project was designed with AutoCAD 2D, Revit and Enscape.
